

TACTICAL TRAILER //
HYBRID TACTICAL SURVEILLANCE TRAILER

HTST

YOUR EYES & EARS ON THE GROUND

This is the start of a new era for monitoring and recording activity in open and urban areas. Thanks to technological breakthroughs and intelligent human engineering, it is now possible to monitor incoming and outgoing traffic in an organized, effective, and fully-documented manner, anytime, anywhere – indoor and outdoor, including bustling public areas, at any time of the day or night.

Track Anything & Anyone

It's time to discover the HTST – a mobile tactical trailer for your immediate surveillance needs that can track and monitor large numbers of people and goods within a radius of up to three kilometers.

The trailer is intended for 24/7 operation in all weather and light conditions. It photographs and surveils 360° of the specified area with the option to rapidly zoom in on any point, as required or based on an alert.

Integral Features

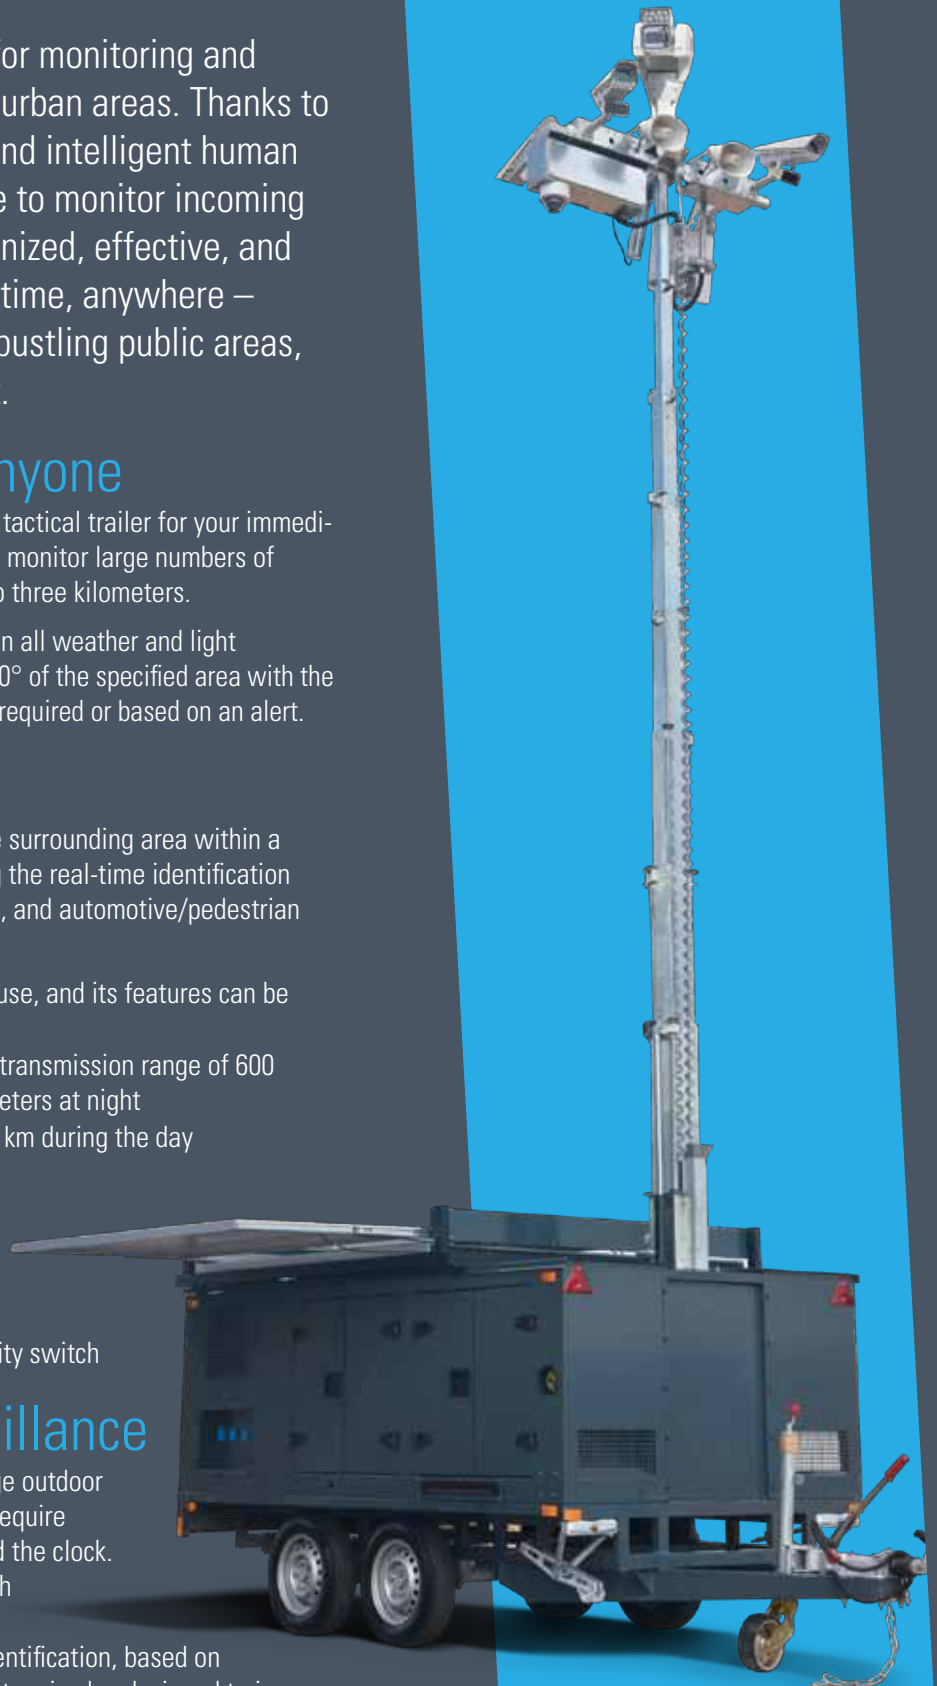

A secure, comprehensive overview of the surrounding area within a radius of up to three kilometers, enabling the real-time identification and tracking of potential suspects, goods, and automotive/pedestrian traffic.

The tactical trailer is simple and easy to use, and its features can be operated via any mobile phone:

- 4 HD cameras with night vision, with a transmission range of 600 meters during daylight hours and 200 meters at night
- HD PTZ camera with a radius of up to 3 km during the day and 600 meters at night
- PA system
- Stainless steel mobile trailer
- Optional radar with a detection range of up to 1.5 km
- Video analytics system and cyber security switch

24/7 Ongoing Surveillance

The HTST is the ultimate solution for large outdoor areas with dynamic traffic patterns that require in-depth monitoring and recording around the clock. The mobile tactical trailer is outfitted with innovative cameras capable of capturing and zooming in on objects for positive identification, based on information received via an alert. The system is also designed to issue real-time alerts based on reasonable suspicion, and all data can be transmitted via Wi-Fi or cellular networks.

Primary Intended Uses

The mobile tactical trailer is equipped with an advanced technological surveillance system suitable for many organizations, companies, and interior/exterior spaces:

Sensitive Facilities, Secure Sites, Airports, Seaports & Hospitals

Identifies arrivals and departures, locates potential suspects, provides security in highly sensitive areas, receives ongoing real-time updates in emergencies, and dispatches emergency rescue teams.

Construction Sites

Provides on-site security for workers and heavy machinery, issues intrusion alerts, and records all materials and supplies entering the premises.

Conferences, Festivals & More Outdoor Events

Surveys, secures, and prevents violent incidents, recognizes increasing crowd pressure at the entrance, and works with the on-site security staff.

Airports & Seaports

Tracks airplanes and cargo ships, monitors and inspects all trucks and other vehicles entering/exiting the port, and identifies potential theft, smuggling, and hostile terrorist activity (HTA).

Search & Rescue

Thoroughly scans crisis areas, locates casualties, identifies access routes, and works in full cooperation with the incident management and emergency rescue teams.

Why Choose HTST?

The HTST mobile tactical trailer presents clients with several clear advantages:

01 Energy Efficient

Solar panels and a hybrid generator ensure that the tactical trailer has significantly reduced electrical consumption, even during lengthy, power-intensive operations. Once battery power drops to 20%, the generator automatically activates and continues running until the batteries are restored to 100%.

02 Impressive Range

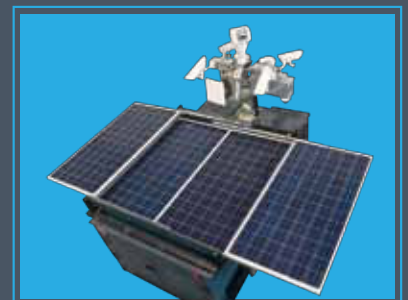

The HD camera has a range of up to 3 km, and the option of radar activity up to 1.5 km provides especially detailed monitoring capabilities, especially in strategic areas.

03 Silent Operation

The generator's ultra-quiet engine is suitable for operation in busy locations without disturbing passersby or adversely affecting normal routine in the surrounding area.

04 Simple & User-Friendly

The tactical trailer is very easy to operate, with no special training required. Its flexible, adjustable mast reaches a height of 6-9 meters, and can withstand strong winds up to 100 km/h.

HTST Specifications

- State-of-the-art stainless steel body with unique corrosion-resistant coating
- Powerful solar panels with an output of up to 30A per hour in optimal sunlight
- Multi-stage hydropneumatic mast, extending up to 9 meters
- Mobile remote control application
- Powerful speakers
- Optional cyber protection system
- Integrated CRISP video management software
- Optional high-quality CRISP video analysis
- 4 full HD cameras with night vision
- 1 full HD PTZ camera
- Spotlights with a 600 meter range
- Optional radar with a 1.5 km range
- 6 kVA - 220 VAC generator
- Batteries with charge controller
